AI

WHAT IS AI?

OECD AI SYSTEM DEFINITION (OECD, 2023)

An AI system, is a machine-based system that is capable of influencing the environment by producing an output (recommendations, predictions or decisions) for a given set of objectives.

01. Perceives environments through data or input
02. Abstracts these perceptions into models
03. Uses the models to formulate options for outcomes

AI'S CHALLENGES

AI'S CHALLENGES

Social Inequities

Amplifies stereotypes, representation harms and prejudices

Data Leakages

Has the potential to leak proprietary information

Energy Consumption

Uses high amounts of compute power leading to high energy consumption

Disinformation

Spreads disinformation through the use of Deep Fakes. Provides in factual information

Human Rights Violations

Infringes and violates people's human rights

Copyright Violations

Uses personal identifiable information (PII) without compensation or consent

Psychological safety

Poses societal risks and harms involving online and psychological safety

Privacy Violations

Scrapes data from the internet without user consent

THE FRAMEWORK

“

AI technologies are moving at breakneck speed and offers humongous benefits to the advertising industry. However, it's of great importance to understand the challenges faced by AI and use AI systems responsibly to boost sales and customer retention.

An aerial photograph of the London skyline at sunset. The River Thames flows through the center, with the Tower Bridge prominently featured. To the left, the Shard is visible. To the right, the modern skyscrapers of the City of London, including the Gherkin, are illuminated by the warm light of the setting sun. The word "THANKS" is overlaid in large, white, sans-serif capital letters on the left side of the image.

THANKS
